- This presentation will be available by videoconference at The Ottawa Hospital
  - Executive Boardroom, TOH Riverside Campus
  - Amphitheatre – TOH General Campus

- The presentation will be available by video on the www.rgpeo.com website approximately 2 weeks after the event

Objectives:

The PATH (Palliative and Therapeutic Harmonization) program is an innovative model to improve appropriateness of care and resource utilization across the healthcare continuum. PATH places frailty at the forefront of evidence-informed decision-making and trains healthcare teams to assemble the “big picture” of each patient’s health story.

Through our presentation, we will review how to:
- understand the gap between what’s medically possible and what’s appropriate
- improve the efficiency of team-based care
- develop transformative care plans that place quality of life at the forefront of decision-making
- improve navigation across the health care continuum
- make optimal use of resources
